There is a UI bugs like scrollbar for the car should work independently not with the main scroll bar in order to give user a good experience , right now when i scroll the component of the car list the main scroll also goes down and i guess it is the problem , why everything here is slow

The History isn't preserve just like in google form or no prompt is displayed if any other (like if i click on email button it redirect me to the gmail , but when i come back all of my form filling disappear , i think it affect the user experience)

Here I see no logic for verification, separate chrome

A tree hydrated but some attributes of the server rendered HTML didn't match the client properties. This won't be patched up.
This can happen if a SSR-ed Client Component used:

- A server/client branch 'if (typeof window !== 'undefined')
- Variable input such as 'Date.now()' or 'Math.random()' which changes each time it's called.
- Date formatting in a user's locale which doesn't match the server.
- External changing data without sending a snapshot of it along with the HTML.
- Invalid HTML tag nesting.

It can also happen if the client has a browser extension installed which messes with the HTML before React loaded.

See more info here: <https://nextjs.org/docs/messages/react-hydration-error>
