

Jangram Car Rental — Action Items

Impromptu Google Meet · May 29, 2026 · 44 min

Client: Nivriti Ingram ("Sam") — Denver, CO · ex-Turo/Airbnb host | **On call:** Neema Ghanbarinia, Ghulam, Nivriti Ingram

Dev / Engineering

Ghulam

- 1 Turo-style calendar (top priority).** Visual calendar showing booked cars as struck-through bars, click-to-open the trip, adjust availability inline, and per-day pricing shown per date. She spends nearly all her time in the calendar + inbox.
- 2 Fix holiday/weekend surcharge not applying.** Her +60% summer override (May 24–Aug 5) is set on the vehicle but doesn't flow into the base price, the admin "Set up a rental" flow, or the "How is this calculated" breakdown. Known bug.
- 3 Blocked-vehicle booking bug.** Vehicle "DJKE" (blocked 5/30–6/5 for Turo) still accepted a booking request. Unavailable cars must reject/hide immediately. Trace the rejected request's reference number.
- 4 Duplicate-request buffer (~30 min).** Same customer submitted the same request twice; add a cooldown to block accidental double-booking (Turo does this).
- 5 Make start/end dates required on the inquiry form.** Customers submit inquiries with no dates.
- 6 Manual override on AI pricing (Revenue Optimiser).** Allow ~10% hand-adjustment while AI handles ~90%. Target 75–80% suggestion accuracy, not 100%.
- 7 Investigate external pricing data sources.** References: Red Scout (Turo estimator — platform-only data, skews high assuming airport rentals) and PriceLabs (Airbnb dynamic pricing). Decide public-API vs scraping; reverse-engineer Turo dynamics. Currently only weather is used externally.
- 8 Embed Meta/Facebook Messenger in-app.** Embed the view only (private API, so no branding); then assess AI-driven replies, ideally fanning out to SMS + email.

Flow Review

design before building

1 Reduce booking friction / reconsider mandatory account creation. Forcing account creation at step 1 is a high barrier — she's not Turo/Uber and risks losing everyone. Review the customer-portal-account requirement.

2 Pre-auth / cancellation flow redesign. Desired: reserve car with card first → send insurance + ID upload links → warn if not filled → lock in ~48h after booking (or up to 1 week before trip for far-out bookings) → auto-release calendar if they bail. Verify compatibility with calendar/vehicle block-out and insurance/ID gating before committing.

Neema: don't confirm anything until the full sync flow is reviewed.

3 Clarify "this is a hold, not a charge" messaging. She missed it at checkout — make the credit-card-hold labeling unmissable. Also discussed scaling the deposit relative to trip length (some clients hold \$500).

Business / Marketing

Neema

1 Send Slack invite + create shared channel (Neema + Ghulam) for proactive white-glove support.

2 Refund owed (~\$150). First-month booking guarantee; 2 months in with near-zero ad-driven bookings (only 1 from her neighbor). Ad creative recently refreshed by Jordan.

3 Referral opportunity. She knows someone with ~200 cars and could refer hosts once her own bookings pick up.

Customer-Side

Nivriti — support if needed

1 Complete WhatsApp Business verification to unlock WhatsApp in the messaging tab (SMS already enabled).
