

Bonzah Compliance Update — Implementation Spec

For: Haseeb From: Ghulam Date: 6 August 2026

Bonzah (our insurance partner) sent updated compliance requirements on 5–6 Aug 2026 with two attachments: **"Embedded Insurance Compliance Requirements"** (what must appear on the rental car company's website) and **"Bonzah Rental Agreement Addendum v2"** (legal clauses that must appear in the signed rental agreement). Bonzah is emailing every connected rental car company directly around the same time, so this needs to ship promptly. Both original .docx files are the source of truth — if anything below is ambiguous, check the original files before guessing at wording.

1 Ground Rule — How Tenants Are Gated (read this first)

Both changes below apply **automatically** to every tenant that has Bonzah turned on — no manual per-tenant setup, no tenant-name hardcoding anywhere.

Condition	Applies to
<code>tenants.integration_bonzah = true</code>	The tenant. This is the <i>same</i> boolean that already controls whether the Bonzah insurance selector renders in that tenant's checkout today (see <code>apps/portal/src/components/settings/bonzah-settings.tsx</code>). Do not introduce a second flag or a hardcoded tenant list.

Important — do not gate on whether the renter actually purchased Bonzah insurance. The Rental Agreement Addendum is a disclosure that Bonzah is offered as an option (a "referral partner" disclosure) — it is not a confirmation of purchase. It must appear on **every** rental agreement for a tenant with `integration_bonzah = true`, whether that specific renter bought coverage or hit "Skip Insurance" at checkout. Do not add any per-rental "did they buy insurance" condition.

The legal/compliance **text itself** (both the website disclosure paragraph and the 10-clause addendum) should be hardcoded as a constant in code — not stored as tenant-editable CMS content. This is insurer-supplied wording; operators must not be able to reword it. There's already a precedent for this in the codebase: `BUNDLE_EXTRA_EXCLUSIONS` in `BonzahInsuranceSelector.tsx` is marked "compliance text, do not reword" — follow the same pattern. If Bonzah ever ships a v3, we update the one constant and it propagates to every Bonzah tenant automatically.

2 Task A — Booking Checkout Disclosure UPDATE EXISTING FILE

`apps/booking/src/components/BonzahInsuranceSelector.tsx`

This file already renders CDW / RCLI / SLI / PAI coverage cards and a disclaimer block (currently around lines 621–658, "Bonzah Disclaimer & Links"). It is **not** a new component — this is an edit to the existing disclaimer block. Compare

against the source doc's product bullet points (damage limits, deductibles, exclusions) too — not just the disclaimer paragraph — in case any dollar figures have drifted from what's currently coded in [COVERAGE_INFO](#) .

What's already correct — leave alone

- Privacy Policy link
- Covered Vehicles link ([bonzah.com/included-and-restricted-vehicle-types](#)) — this already satisfies the doc's "Excluded Vehicles" link requirement, same URL
- Optional per-tenant brochure link ([tenant.bonzah_brochure_url](#))
- "Insurance provided by Bonzah" attribution line

What's missing — add this

1. **Broker-of-record + coverage-exclusions disclosure paragraph** — entirely new, add verbatim (see box below).
2. **Extend the age/license line** — current text only says "21 years and older with a valid driver's license." The source doc requires the additional-driver + unlicensed-driver language too (included in the verbatim block below — replace the current one-line version with the full paragraph).
3. **Bonzah FAQ link** — not present today. Add: <https://bonzah.com/faq>
4. **Update the Terms & Conditions link** — currently points to [bonzah.com/terms](#) . Brandon's email specifies a new Consumer Terms of Service URL that "should be available on the rental car company site": <https://business.bonzah.com/terms> . Point the existing link there.

VERBATIM — ADD AS THE NEW DISCLOSURE PARAGRAPH(S), DO NOT REWORD

Pablow Inc. dba Bonzah.com ("Bonzah") is the licensed broker of record and offers insurance coverage through various insurance carriers. The specific carrier issuing your policy will be identified at the time of purchase and in your policy documents.

Coverage may include Collision Damage Waiver (CDW/LDW), Rental Car Liability Insurance (RCL), and Supplemental Liability Insurance (SLI) as offered. Coverage excludes medical payments (MedPay), Personal Injury Protection (PIP), Underinsured Motorist (UIM), and Uninsured Motorist (UM) coverage where permitted by law. Full terms, conditions, limits, and exclusions are set forth in the policy documents provided at the time of purchase.

Insurance is only for drivers 21 years and older with a valid driver's license and must be listed as an additional driver on the rental agreement. Unlicensed drivers are not entitled to coverage under any circumstance.

The renter is responsible for any unlisted drivers. Insurance may not apply if the renter or additional driver violates the rental agreement, insurance agreement, or violates traffic regulations.

By proceeding with your purchase, you agree to Bonzah.com's Terms of Service and Privacy Policy.

Today, rental agreements (BoldSign templates) get dynamic clauses spliced in at render time — e.g. mileage rows, the tenant's CMS terms-and-conditions block via a `{{terms_and_conditions}}` placeholder. This happens in a shared injection module that exists in **three separate copies** that must be kept in sync:

```
supabase/functions/_shared/agreement-injection.ts (+ agreement-terms.ts if content-fetching
is needed)
apps/portal/src/lib/agreement-injection.ts
apps/booking/src/lib/agreement-injection.ts
```

There is currently **no insurance-specific injection slot**. The existing code comment mentioning "built-in clauses cover insurance, liability and governing law" refers to static boilerplate already baked into the operator's template — not a dynamic slot. This needs a genuinely new function.

What to build

1. Add a new function, e.g. `injectBonzahInsuranceAddendum(html, tenant)`, mirroring the existing T&C injector's pattern: check for an idempotency marker/placeholder so re-rendering the same agreement never duplicates the block.
2. Gate strictly on `tenant.integration_bonzah === true` (see Section 1). If false, no-op — template is returned unchanged.
3. Insert the fixed addendum HTML block at the same insertion point used for the T&C clause — just before the signature block/marker.
4. Apply the same change to all three files listed above. Confirm behavior is identical across: the portal's agreement preview, the booking-side generation path, and the actual edge function call that sends the document to BoldSign for signing.

Pablow, Inc. dba bonzah.com — Insurance Addendum

1. Insurance Requirement. You (the renter) may be required to maintain a minimum level of automobile insurance coverage for the rental vehicle during the entire rental period. You may be able to satisfy this requirement through your own insurance, a credit card benefit, or an insurance product offered through one of our referral partners, including bonzah.com.

2. Bonzah Is a Referral Partner. Bonzah.com is one of our referral partners for optional rental insurance products. The products are offered and administered by Pablow, Inc. dba bonzah.com, the licensed broker, and its affiliate Bonzah, Inc.; Pablow, Inc. may act as the broker of record. We are not the insurer, are not obligating you to purchase any product from bonzah.com, and do not sell, solicit, negotiate, or advise on the insurance. Any coverage you purchase is a contract between you and the insurer/broker, subject to the bonzah.com Terms of Service and the applicable Description of Coverage.

3. Personal Use Only. Insurance products purchased through bonzah.com apply to personal use of the rental vehicle only and do not cover business, commercial, gig, ridesharing, or other non-personal use. As a broker, Bonzah may make available separate products for gig or other commercial use; contact bonzah.com to learn what may be available for non-personal use.

4. Excluded Vehicles. Certain vehicles are not eligible for coverage through bonzah.com. You are responsible for confirming that your rental vehicle is eligible before relying on any bonzah.com coverage. The current excluded vehicles list is available at bonzah.com.

5. Coverage Term; 24-Hour Cycles; Continuous Coverage; Extensions. Insurance purchased through bonzah.com must be purchased prior to vehicle pickup and must be continuous for the entire duration of the rental. Coverage runs in 24-hour cycles. All extensions must be purchased prior to the lapse of an existing policy. Insurance begins at the rental pickup time as specified in the rental agreement. If the rental agreement doesn't specify a start time, insurance starts at the scheduled pickup time for the reservation as designated in the rental car reservation system. In the absence of a rental agreement start time or scheduled reservation start time, when insurance is purchased on the same day as the rental agreement start date, insurance begins at the purchase time. In the absence of a rental agreement start time or scheduled reservation start time, when insurance is purchased on any day preceding the rental agreement start date, insurance begins at 12:00 AM the day of the rental agreement. Coverage cannot be reinstated, and a gap in coverage cannot be filled, after a lapse has occurred. You (the Renter) are responsible for confirming coverage, including any extensions or modifications. This can be done at <https://us.bonzah.com/#/orders>, and you should receive a confirmation email.

6. Your Responsibility to Read the Coverage. You are responsible for reading and understanding the bonzah.com coverages, limits, exclusions, and Description of Coverage before you take the vehicle. If you are not comfortable with the coverage, do not take the vehicle and contact bonzah.com during business hours.

7. Not "Full Coverage." Any one policy purchased through bonzah.com is not "full coverage", is subject to the limits stated in the policy and Certificate of Insurance, and may not be sufficient to cover the entirety of any claim. You are responsible for determining whether the coverage is appropriate for your needs and for carrying any additional coverage that makes sense for you. Personal Accident / Personal Effects Insurance (PAI) is not rental car coverage; it is a travel insurance product.

8. Opt-Out of UM / UIM / PIP / Med-Pay. By purchasing or extending an insurance product through bonzah.com, you — and any additional, authorized drivers, and passengers — opt out of Uninsured Motorist (UM), Underinsured Motorist (UIM), Personal Injury Protection (PIP), and Medical Payments (Med-Pay) coverage, to the extent permitted by law in the applicable state. Where a state does not permit rejection of a coverage, that coverage applies at the minimum required by law.

9. Authorized Drivers. Only authorized drivers listed on this rental agreement are permitted to operate the vehicle. Any bonzah.com coverage applies only with respect to authorized drivers named on the rental agreement and the insurance application. You are responsible for any operation of the vehicle by a driver who is not listed and authorized.

10. Timestamps. The rental start time, return time, and any extensions or modifications are recorded by timestamp. Coverage purchased through bonzah.com aligns to the rental period as reflected in those timestamps, and you are responsible for ensuring coverage matches your actual rental and any changes to it.

4 QA Checklist

- ☐ Booking checkout: new disclosure paragraph, extended age/license line, FAQ link, and updated Terms URL all render correctly on the insurance step (desktop + mobile) for a Bonzah-enabled tenant
- ☐ Bundle path (combined CDW+RCLI toggle) still renders correctly — the disclosure edit shouldn't touch that logic, but confirm no layout regression
- ☐ Product-level details (CDW/RCLI/SLI/PAI dollar limits, deductibles, exclusions) diffed against the source doc — flag anything that doesn't match `COVERAGE_INFO` in code
- ☐ Generate a test rental agreement for a tenant with `integration_bonzah = true` → addendum appears exactly once, correctly formatted, positioned before the signature block
- ☐ Generate a test rental agreement for a tenant with `integration_bonzah = false` → addendum does **not** appear (no regression for non-Bonzah tenants)
- ☐ Re-render / regenerate the same agreement twice → addendum does not duplicate (idempotency guard works)
- ☐ Confirm addendum appears even when the renter skipped Bonzah insurance for that specific rental (tenant-level gate only — see Section 1)
- ☐ Confirm identical behavior across all three copies of the injection logic (shared edge function, portal, booking) — these are not imported from one place, they're maintained as parallel copies
- ☐ Spot-check the new Consumer ToS link (`business.bonzah.com/terms`) actually resolves before shipping
- ☐ After deploy: check one real (or sandboxed) Bonzah-enabled tenant's live checkout + generate one real agreement end-to-end to confirm both pieces show up correctly
- ☐ Commit, push to `main` , and confirm the Vercel deploy goes through clean on all affected apps (booking + whichever app owns the agreement-generation path)
