

Response to Your Requests

Below is a point-by-point update on the nine items you raised.

Hi Victor — thank you for the detailed list. We've worked through each point. Items already actioned are marked **Done** / **Fixed**; two points need a quick confirmation from you before we proceed.

1 Customer Database Management

NEED INFO

Quick question: what would you like here — (a) importing an existing customer list into your portal, (b) guidance on adding/editing/managing customers day-to-day, or (c) a specific issue that isn't working? Let us know and we'll action it.

2 Turo Availability Synchronisation

ANSWERED

Turo has **discontinued their calendar-sync API**, so automatic Turo availability syncing is no longer possible on any platform — this is a Turo-side change, not a Drive-247 limitation. As a workaround, you can use the **Blocked Dates / Fleet Calendar** tool in your portal to manually mark a vehicle unavailable for the dates it's booked on Turo; your booking site will respect those blocks and prevent double-bookings.

3 Account Creation — "Invalid Passcode"

FIXED

Resolved. The system was sending **two competing verification codes** (one from the sign-in service and one from our own email), and entering the wrong one produced the "invalid passcode" error every time. We've reconfigured it to send a **single code**. Account creation now works on the next attempt — this fix applies platform-wide.

4 Insurance Stuck on "Being Reviewed"

FIXED

The review process works — but the certificate is only saved and reviewed **once the booking is completed**. If a booking is abandoned before checkout, nothing is saved, which is why your test upload left no trace. We've **reworded the message** so it no longer implies a review is happening before the booking is placed. Once a booking is placed: the insurance is saved, automatically scanned, and you can **Approve / Reject / Rescan** it on the rental detail page.

5 Username Change

DONE

Your login has been changed from `admin@openbayrental.com` to `admin@obrental.com`. Use your existing password — nothing else changed. The old address no longer works as a login.

6 Support Email

DONE

Your support/contact email has been changed from `support@zighida.com` to `admin@obrental.com`. It now appears wherever your booking site shows a contact email.

7 Footer — "DALLAS" → "Los Angeles"

DONE

Your footer now reads **"Reliable Car Rentals in Los Angeles"** and your address shows **Los Angeles, CA**. You can edit footer content yourself anytime in the portal under **CMS → Site Settings**.

8 SMS Opt-In Page

NEED INFO

To send text messages (SMS) to customers in the US, the phone carriers require a public **SMS opt-in / consent page** that shows how customers agree to receive texts — this is part of **Twilio's 10DLC compliance**, and registration is rejected without it.

Please confirm: (1) Do you plan to send SMS to your customers? (2) If so, would you like us to build the opt-in page so you can register with Twilio? (3) Do you already have a Twilio account, or would you start fresh?

9 Mobile Phone App

ROADMAP

Noted — a dedicated mobile app is on our future roadmap. We'll keep you updated as it progresses.

In short: items 3, 4, 5, 6 and 7 are **complete**, item 2 is **answered**, and we just need your reply on **items 1 and 8** to finish those off. Anything unclear, just reply and we'll be happy to help.

Kind regards,

Technical Department
