

Jangram — Sam's Feedback Fixes (Round 2)

What Sam asked · what we did · a simple example — 6 fixes, all complete

1 · Calendar — show all cars

DONE

ASKED "It only shows cars that are blocked off."

DID **Calendar now shows the whole fleet — every car, all the time.**

EXAMPLE An available Tesla with no bookings still gets its own row, ready to block.

2 · Type-in dates to block

DONE

ASKED "Drag won't reach my long bookings."

DID **Block popup now has Start/End date fields to type, plus a "+ Block" button on each car.**

EXAMPLE Blocking a car for 3 months — just type the dates instead of dragging across screens.

3 · Drag blocked the wrong dates

DONE

ASKED "I have to select 2 days early to block the right ones."

DID **Drag now pre-fills the dates; you see & confirm the exact dates before saving.**

EXAMPLE Drag roughly over June → popup shows "Jun 5 → Jun 6" → fix if needed → save. No guessing.

4 · Mileage bug

DONE

ASKED "1 month + 1 day gives 3000 miles instead of 1550."

DID **Mileage is now counted per day.**

EXAMPLE 1,500 mi/month = 50 mi/day → 31 days = $50 \times 31 = 1,550$ (was wrongly 3,000).

5 · Weekly / monthly / season prices

DONE

ASKED "Season prices still not applying."

DID **The price customers see (car list + booking widget) now includes the right weekly/monthly rate AND the seasonal markup.**

EXAMPLE A \$100/week car during her +60% summer now shows ~\$160 for that week, not \$100.

6 · AI pricing — show the final price

DONE

ASKED "Does the AI include my summer markup? It looks too high."

DID **AI still suggests a clean base price; we now show the final price with her markups underneath.**

EXAMPLE "AI suggests \$100/day · Summer (+60%): \$160/day" — she sees both, no confusion.

Status

All 6 fixes complete and code-checked (no new errors). Applied for **all rental companies**, not just Jangram. Every new screen works in **dark & light mode**.

Not on the live site yet — held for Ghulam's testing first, exactly as requested.

Held for later (Sam said "hold for now"): book the car first, then ask for ID + insurance.

Message for Sam

Hey Sam! Worked through your feedback — here's what's fixed 🎉

📅 **Calendar** — shows *all* your cars now, you can type exact dates to block (or use the new "+ Block" button), and blocking lands on the right dates — you confirm them before saving.

💰 **Pricing** — weekly/monthly + seasonal prices now show in what customers see, and the mileage bug is fixed (1 month + 1 day = 1,550 miles, not 3,000 🙌).

🤖 **AI pricing** — suggests a clean base price, and now shows the final price with your seasonal markup right under it (e.g. "Summer +60% = \$160").

All in testing on our side first — we'll get it to you once it's checked. Thanks for the detailed notes! 👍
