

# Jangram — Sam's Requests: Status

What Sam asked · what's done · what's left · and why — a shared to-do list

## ✓ DONE — shipped

|                             |                                                                                                                  |
|-----------------------------|------------------------------------------------------------------------------------------------------------------|
| Holiday / weekend pricing   | Markups now apply to <b>every</b> rental length (weekly/monthly too), not just short ones. <b>DONE</b>           |
| Blocked cars still bookable | Cars you block (e.g. on Turo) are now hidden from those dates everywhere — no more manual rejecting. <b>DONE</b> |
| Duplicate booking requests  | A double-click / re-submit can no longer create the same request twice. <b>DONE</b>                              |
| Inquiry form dates required | Start & end dates are required on the inquiry form, with a clearer message. <b>DONE</b>                          |
| Turo-style calendar         | Blocks show on the calendar, drag-to-block, per-day price markers, click a booking to open it. <b>DONE</b>       |
| AI pricing suggestions      | Each car shows a suggested price + a "Why?" explanation. A suggestion, you stay in control. <b>DONE</b>          |

## 🔧 IN PROGRESS — Sam's latest feedback (this batch)

|                                   |                                                                                                             |
|-----------------------------------|-------------------------------------------------------------------------------------------------------------|
| Calendar: show all cars always    | Was only showing blocked/booked cars. Now shows the whole fleet. <b>DONE</b>                                |
| Calendar: type-in block dates     | Drag couldn't reach long bookings — adding date fields so you can type exact dates. <b>BUILDING</b>         |
| Calendar: drag blocks wrong dates | "Have to select 2 days early." Fixed by letting you confirm/edit exact dates in the dialog. <b>BUILDING</b> |

## 📅 TO DO — this batch (not started yet)

|                                          |                                                                                                              |
|------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| Weekly/monthly/season price not applying | Engine fix is live, so this is a display issue on the screen you use — need to reproduce & fix. <b>TO DO</b> |
| Mileage bug (1mo+1day = 2× miles)        | Will count mileage per-day so 1 month + 1 day = 1,550 not 3,000. <b>TO DO</b>                                |
| AI: show final (seasonal) price too      | Show the seasonal-adjusted price next to the AI's base suggestion. <b>TO DO</b>                              |

## P NOT DOING YET — parked (with reasons)

|                                             |                                                                 |
|---------------------------------------------|-----------------------------------------------------------------|
| Book car first, then ask for ID + insurance | Sam said "hold that one for now." Will revisit. <b>DEFERRED</b> |
|---------------------------------------------|-----------------------------------------------------------------|

|                                                           |                                                                                                                 |
|-----------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| <b>Reserve-with-card-hold + deadlines + auto-release</b>  | Touches calendar, payments, insurance & refunds — too risky to rush. Needs careful design first. <b>PARKED</b>  |
| <b>Reduce booking friction / optional account</b>         | Agreed to do — keep ID check, make account optional, fewer steps. Planned for a future update. <b>PLANNED</b>   |
| <b>AI using outside market data (PriceLabs/Red Scout)</b> | Outside data is unreliable / gray-area legally. AI uses platform comparables + demand instead. <b>NOT BUILT</b> |
| <b>AI fully owns seasonal pricing</b>                     | Chose the simpler route instead: keep your manual seasonal control + show the final price. <b>N/A</b>           |

**Legend:** DONE = shipped · BUILDING = in progress now · TO DO = next in this batch · DEFERRED/PARKED/PLANNED = not now, with reason.

Drive247 · Jangram Car Rental · Working to-do — review together. Nothing in this batch is on the live site until Ghulam tests it.
