

Stripe Account Migration Checklist

Moving off the ex-partner's "Cortek US" account (`acct_1SqMDfB2eFJBbbzi`) → a new self-owned account, configured as an identical twin, then migrating tenants one-by-one until the old account is empty and retired.

Label in front of every task:

CLAUDE

I do it myself (code / API / MCP)

YOU

I need you (dashboard / Stripe support / keys)

SKIP

not needed

🚩 Phase 0 — Decisions & new account setup

- ☐ **YOU** **Decide country of new account: UAE vs self-owned UK/US** (UAE blocks US-based operators from Connect — UK/US avoids that. Pick UAE only if residency/entity forces it.)
- ☐ **YOU** Create the new Stripe account (entity + local bank account ready)
- ☐ **YOU** If UAE: contact Stripe Sales to enable Connect (not self-serve in UAE; request Custom/Express + `destination_charges` + `separate_charges & transfers`)
- ☐ **YOU** Enable products on new account: Billing, Connect, Customer Portal, Radar, Tax (match the old account)
- ☐ **YOU** Generate test + live keys: secret + publishable
- ☐ **YOU** Hand keys to Claude OR load directly into Supabase secrets

📦 Phase 1 — Make the new account a config-identical twin

1a. Blueprint export (from old account)

- ☐ **CLAUDE** Export full config spec from old account via MCP → repo file (every product, price, amount, currency, interval, coupon)
- ☐ **YOU** Review the exported spec; mark which duplicate plan-tier products to drop

1b. Recreate via API (on new account)

- ☐ **CLAUDE** Recreate master product **Drive247 Platform Subscription**
- ☐ **CLAUDE** Recreate plan tiers (Incubator / Launch / Growth) — clean, no duplicates
- ☐ **CLAUDE** Recreate setup / onboarding fee products
- ☐ **CLAUDE** Recreate coupons / promo codes
- ☐ **CLAUDE** Capture all new `price_...` / `prod_...` IDs → mapping file (old ID → new ID)
- ☐ **SKIP** Credit packs (`Drive247 Credits (N)`) — auto-created per purchase

1c. Dashboard config (can't be done by API)

- ☐ **YOU** Connect platform profile: business name, brand colour, icon/logo
- ☐ **YOU** Customer Portal settings (subscription management options)
- ☐ **YOU** Radar rules (copy any custom rules)
- ☐ **YOU** Stripe Tax settings (if used)
- ☐ **YOU** Statement descriptor

1d. Webhooks (register same URLs on new account → new signing secrets)

- ☐ **YOU** `stripe-webhook-live`
- ☐ **YOU** `stripe-webhook-test`
- ☐ **YOU** `stripe-connect-webhook`
- ☐ **YOU** `subscription-webhook`

- ☐  **YOU** Send all 4 new signing secrets to Claude

Phase 2 — Codebase: dual-account routing

- ☐  **CLAUDE** Migration: add `tenants.stripe_platform_account ( 'uk' | 'ae' , default 'uk' )`
- ☐  **CLAUDE** Extend `_shared/stripe-client.ts` : `getStripeClient(mode, account)` , `getPublishableKey` , `getWebhookSecret` , `getConnectWebhookSecret` , `getConnectAccountId` , + `getTenantStripeAccount()`
- ☐  **CLAUDE** Update subscription edge functions to route by tenant's account
- ☐  **CLAUDE** Webhook fns verify against both signing secrets (one URL serves both accounts)
- ☐  **CLAUDE** Frontend publishable-key resolution per account
- ☐  **YOU** Add UAE-variant secrets to Supabase: `STRIPE_LIVE_SECRET_KEY_AE` , `STRIPE_TEST_SECRET_KEY_AE` , `STRIPE_LIVE_PUBLISHABLE_KEY_AE` , `STRIPE_TEST_PUBLISHABLE_KEY_AE` , `STRIPE_LIVE_WEBHOOK_SECRET_AE` , `STRIPE_TEST_WEBHOOK_SECRET_AE` , `STRIPE_CONNECT_WEBHOOK_SECRET_AE` , `STRIPE_SUBSCRIPTION_SECRET_KEY_AE` , `STRIPE_SUBSCRIPTION_WEBHOOK_SECRET_AE` , `STRIPE_TEST_CONNECT_ACCOUNT_ID_AE`
- ☐  **CLAUDE** Deploy edge functions + push to main (Vercel)
- ☐  **CLAUDE** Smoke-test: one test tenant flagged `'ae'` → checkout + webhook round-trip

Phase 3 — Migrate tenants one-by-one (per tenant, later)

For *each* operator, in order:

- ☐  **YOU** Subscription card → Stripe self-serve PAN copy (old → new account)
- ☐  **CLAUDE** Recreate the live subscription via Billing migration toolkit on new account
- ☐  **YOU** Connect → operator re-onboards on new account (new KYC/bank — unavoidable). ⚠️ **UAE only allows this for UAE-based operators; US operators = separate decision**
- ☐  **CLAUDE** Flip that tenant's `stripe_platform_account` → `'ae'`
- ☐  **CLAUDE** Verify: booking payment + subscription both work on new account

 *History / balance / payouts stay on old account (always)*

Migration order (suggested — smallest/lowest-risk first): _____

Phase 4 — Retire old account

- ☐  **CLAUDE** Confirm every tenant = `stripe_platform_account = 'ae'`
- ☐  **YOU** Confirm no live charges/subscriptions remain on old account
- ☐  **YOU** Revoke old account from the integration / disconnect MCP
- ☐  **YOU** Remove old `STRIPE_*` (non-`_AE`) secrets from Supabase
- ☐  **CLAUDE** Drop the `'uk'` branch from routing code (single-account again)

Blocked on (right now):

-  **YOU** UAE vs UK/US country decision
-  **YOU** New account created + API keys

Next action (unblocked, safe):

-  **CLAUDE** Run **Phase 1a** blueprint export off the old account (read-only) — say "go"
